Reading a metric ruler answer key

This page contains links to free math worksheets for Metric Metric Measuring problems. Click one of the buttons below to see all the worksheets in each set. You can also use the 'Worksheets' menu on the part of this page to find worksheets across other math topics. Metric Rule membership worksheets Learn to read a ruler is a great way to apply math skills to real-world objects and an important elementary degree skill. The measuring worksheets on this page provide practice work that will prepare first-grade and second-grade students for real prevailing activities with metric measurements. The first few sets of worksheets on this page deal with either reading or marking a metric at a specific point on a ruler marked in centimeters and millimeters. Because many of the worksheets only show a partial ruler, when a student reads these problems, students will have to look carefully at the ruler marks to determine the relative position and get the correct answer. There are different sets of worksheets that deal with both centimeters and millimeter positions, and key ruler skill is to understand how the size of the different ruler tick points corresponds to different metric units. Measuring Worksheets for Lengths Another super-useful ruler skill measures the length of an object. Initially, it is similar to just reading a position from the ruler, but if the object is not exactly positioned on the zero centimeter position of the ruler, it creates a metric overdraft problem for the student to solve. Some of these calculations involve reading a few millimeters less than a whole centimeter position at the beginning, and similarly a few more millimeters than an entire centimeter to the end position. Being able to come or regroup millimeters to get a final answer in centimeters and millimeters makes these gauge worksheets a useful tool in converting and regrouping metric units of length metric. Ready for more measuring practice? The worksheets at the link below provide similar practice for thumb (customary unit) measurements! Thumb Measuring Worksheets This using worksheet is perfect for engaging in reading a metric ruler. The using worksheet will produce eight Metric Ruler problems per page. First, select the increment you want to use and then next you have the option to add a memo line that will appear on the worksheet for additional instructions. The worksheet's reply page will be created if you checked it out late. When you're ready to create your new and unique Measuring Worksheet, press the Create button. Click here for more measurement worksheets Measuring the nearest centimeter #1 FREE Measure each object to the nearest centimeter using the ruler shown 3rd by 6th Grade Compare lengths: Questions Write the approached measurement of each, rounding to the nearest Then tell how much longer the nail is than the paperclip. And tells how much longer the pencil is than the nail. 2nd Grade
